## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7 and 39-42, drawn to a method of driving a display in a normal mode and a power saving mode, classified in class 345, subclass 212.
  - II. Claims 8-38, 43-54 and 56, drawn to display driving circuitry primarily by means of gray scale, classified in class 345, subclass 89.
  - III. Claim 55, drawn to a method of driving a color matrix liquid crystal display, classified in class 345, subclass 72.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions of Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because as shown by Group I, the limitations disclose a method of driving a color display in a normal driving mode and a power saving driving mode using voltages. The subcombination has separate utility such as Group II discloses in the limitations a circuit for driving a color display by using grayscale not a method for driving.
- 3. Inventions Group I and Group III are related as combination and subcombination.

  Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed

Art Unit: 2675

does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because as shown by Group I, the limitations disclose a method of driving a color display in a normal driving mode and a power saving driving mode. The subcombination has separate utility such as Group III discloses in the limitations a method for driving a matrix color display by sequentially applying a plurality of scanning and data signals.

- 4. Inventions Group II and Group III are related as combination and subcombination.

  Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group II discloses in the limitations a circuit for driving a color display by using grayscale not a method for driving. The subcombination has separate utility such as Group III discloses in the limitations a method for driving a matrix color display by sequentially applying a plurality of scanning and data signals.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/051,567

Art Unit: 2675

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Srilakshmi K. Kumar whose telephone number is 571 272 7769.

The examiner can normally be reached on 10:00 am to 6:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Sumati Lefkowitz can be reached on 571 272 3638. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
